E2 Systems Concrete Conveyor Attachment

E2 Systems portable modular conveyor attachment is for use on wheel loaders to place concrete in front of a paver. Designed for loaders with capacities of 2.5 cubic yards or greater, the conveyor is operated from inside the cab using hydraulic controls and the power of the loader. The low-torque hydraulic motor requires a pump feed of about 45 gpm, the company says. The conveyor belt speed is 555 fpm with a width of 60 inches. The conveyor length is 21 feet, and it folds at midpoint to enable travel in a 10-foot path while attached to the loader.
